Bilateral Meetings

- Thursday (1:30pm - 6:00pm)
- Friday (9:00am - 12:00pm)
- Friday (12:00pm - 4:00pm)

Description

Torafugu tech's principal business is to develop software and algorithms and engage in R&D on Artificial Intelligence (AI) for use in primary care medicine. Our algorithms look to processes, aggregate and sort data in real time providing on-demand processing of multiple streams of data. By taking feeds from wearable devices, background health status and in some instances blood levels of important markers, we aim to create a real-time 'information dashboard' for doctors. Such a platform will enable physicians to have a more informed view of a patient's state of health. Ultimately, we envision our new engines will be used by a variety of businesses that rely on health information or are involved in health and health-tech that look to harness the power of wearables and more. Our processes allow real-time tracking of complex data and introduce machine learning excellence for use in healthcare.
